1 INTRODUCTION

This guidance explains the structure of the required inbound file and the check procedures that follow. For more information, see [tax.fi > About us > Information and material on taxation > IT developers > e-Filing guidance > Electronic filing of information returns General description](#).

2 DESCRIPTION OF THE INFORMATION FLOW AND SUBMITTAL OF FILES

Employers and other similar payors must use the format discussed in this document when sending their Employer Payroll Reports (annual information) in accordance with the rules of the Official Decision of the Tax Administration on the Information-Reporting Requirement. The reporting concerns **tax-exempt reimbursement of expenses paid to the workers on the payroll**.

The reporting must include itemizations of each beneficiary or recipient of wages etc. Instructions for setting up the itemizations are provided below.

This Employer Payroll Report version is the itemization of worker-beneficiaries who are paid reimbursement for expenses (VSPSKUST). It is for filers who have an independent IT system keeping track of their reimbursement payments and a different IT system for payroll accounting. For this reason, two filings may be created for the same beneficiary (worker). Whereas tax-exempt reimbursement is reported by the VSPSKUST information flow, payroll is by the VSPSERIK information flow.

If payments from to the same beneficiary from the same payer are reported, consisting of wages, tax-exempt reimbursements and taxable reimbursements, produced by different software applications, there is a risk of double reporting. To prevent that, the data element for identification purposes (014) is added to the flow.

For more information and instructions, go to the 'Annual Information Returns' pages of the Website, > Forms > Annual information.

You must file your information returns electronically if you had more than five (5) workers whom you paid during the year. However, the requirement to use e-filing does not concern physical persons and estates of deceased physical persons unless they operate a trade, business, or agricultural farms/forestry units.

For more information on how filers must identify themselves electronically, on the requirements on Katso ID and Katso Role, and on the information flow's check routine for authorizations, click [here](#).

2.1 Name of the software that produced the file – Data element 014

This data element (014) is mandatory, for purposes of identification, in the VSPSERIE, VSPSERIK, VSPSKUST, VSRAERIE and VSPSVYHT annual information flows.

In the future, the entry in 014 must contain the Business ID of the software provider company and two additional control characters. An underscore is required between the Business ID and the control characters. For the Business ID, it is mandatory to follow the exact format. The control characters are intended for the software provider company, so they can identify their software product according to their own needs.

The format of the name of software (014) data element is the following:

Y-TUNNUS_AN2 (12 characters in total)

Example:

The provider of the "AccountingPro" software application has 6606611-7 as its Business ID. The provider not only sells "Accounting Pro" but also another application called "PayrollPro".

The entry in this data element should be:

014: 6606611-7_AP (Accounting Pro)

014: 6606611-7_PP (Payroll Pro)

If the software company does not have a Finnish Business ID, the dummy value 0000000-0 is permitted, for example, you can enter: 0000000-0_U1.

If the software is developed independently by the payer reporting the annual information, enter the Business ID of the payer company in this field. Add control characters as appropriate.

3 MAKING CORRECTIONS

For more information, see [tax.fi > About us > Information and material on taxation > IT developers > e-Filing guidance > Making corrections to e-filed submittals of information returns](#).

However, this information flow has a special requirement affecting any corrections: We recommend that filers, when making corrections, use the same information flow, and the same software, as they used for the original submittal.

In other words, making corrections using the VSPSERIE flow is possible, but if this is done it is important to note that it will replace the VSPSERIK and VSPSKUST flows submitted earlier provided that the same software is used.

4 PERIOD OF VALIDITY

This specification sets out the requirements of file formatting that come into force 25 January 2018 and continue to be in force until a new version of this specification is released.

The deadline for filing is 5 February 2019.

5 COMBINED INFORMATION FLOWS

You may send us the following flows in the same computer file as you are sending your VSPSKUST flow:

- VSPSVYHT
- VSPSERIK
